Readers should seek specific legal advice before taking any action with respect to matters mentioned in this publication. The attorney responsible for this publication is Brent E. Kidwell, Jenner & Block LLP, 353 N. Clark Street, Chicago, IL 60654-3456. Prior results do not guarantee a similar outcome.

AVIATION AND AEROSPACE

Jenner & Block's Aviation and Aerospace Practice assists companies with the services they need in an increasingly challenging, dynamic and global business and operating environment. Jenner & Block lawyers have decades of experience counseling clients in the aviation and aerospace industry as well as related fields including procurement, transactions, insurance, cybersecurity, and risk management. We provide strategic and pragmatic solutions to help clients mitigate risks and achieve business objectives. Our clients benefit from the substantial and varied industry experience of our professionals, including a former vice president, deputy general counsel, and associate general counsel of a major US airline; both a former FAA acting chief counsel and deputy chief counsel; a former senior lawyer in the DOT Office of the General Counsel; and a licensed commercial pilot and certified flight instructor.

Regulatory and Administrative Practice

Helping clients understand and shape rulemakings initiated by the various agencies that regulate aviation and aerospace is a central part of our practice. Our regulatory work focuses primarily on the US Department of Transportation and Federal Aviation Administration, as well as the Transportation Security Administration, the Department of Defense, other US agencies, and foreign civil aviation authorities.

Aerospace

The aerospace industry is highly regulated and constantly evolving. Companies benefit from outside counsel who are immersed in the interconnected regulatory, legal, commercial, technical, and operational issues that drive the industry. Our practitioners have decades of experience solving problems for aerospace companies, successfully defending enforcement actions, and advising on certification, conformity, compliance, product difficulties, and cutting-edge emergent issues.

Commercial Disputes

Effective representation of aviation and aerospace clients in disputes requires an in-depth and up-to-date understanding of the industry. Our lawyers have industry-specific experience in regulation, operations, certification, and transactions as well as airport management and emerging developments in technology. We have a long track record of applying this experience to win victories in court and in international arbitrations for aviation and aerospace clients.

Enforcement Defense and Administrative Litigation

Our lawyers have extensive experience representing airlines, manufacturers, and other certificate holders in defending and appealing enforcement actions. Our work includes defending DOT and FAA investigations and enforcement actions, negotiating reasonable settlements in multi-million dollar civil penalty cases, and finding creative ways to help clients avoid penalties entirely. We also routinely conduct internal investigations and compliance reviews in a wide-variety of contexts.

Corporate Aviation

Our practice encompasses the full range of issues affecting corporate aircraft owners and operators. Some of our clients have large flight departments, others own a small fractional interest, and still others are major operators of large aircraft. We help clients manage the broad range of relationships faced by every corporate aircraft operator, owner, Charter Company, Management Company, and fixed-base operator.

Unmanned Aircraft Systems (UAS)

A unique combination of real-world aviation experience and full-service regulatory knowledge developed from supporting dynamic aviation and aerospace clients, as well as innovative multi-disciplinary capabilities necessary to address the full spectrum of issues relating to unmanned aircraft systems. The UAS ecosystem is highly regulated; closely scrutinized, and rapidly changing; our lawyers have the experience and ability to help clients successfully navigate this industry.
